

Lumence — Product Requirements Document (Final)

1. Product Goal

Make sharing daily progress effortless.

2. Problem Statement

Building in public creates friction between doing work and writing updates.

3. Persona

You log tasks in the morning, add descriptions while working, and use a single rolling scratchpad at any hour.

4. Scope

In scope: Marketing landing page; Clerk auth (Google/X/LinkedIn OAuth); task CRUD (create/read/update title-description-status/delete), status todo↔done; unfinished tasks roll forward; completed tasks clear at midnight; rolling scratchpad; AI chat; manual publishing; responsive web (mobile-first, not native apps); streak; Mark as published.

Out of scope: One-click posting; analytics; media; draft history; native mobile apps; scratchpad sync; per-day notepad; task history view; model selection; automatic AI context passing.

5. Core Features

1. Task CRUD with rollover/reset rules.
2. Local rolling scratchpad.
3. General-purpose context-free AI chat; user pastes text manually.
4. Manual publishing; X counter only when X selected; over-limit doesn't block; Mark as published once daily advances streak.
5. AI cap.
6. Streak.

6. User Stories

- Edit task title/delete tasks.
- Log tasks in morning and describe during work.
- Chat with AI by pasting text I choose.
- Confirm I published so streak is accurate.
- Use it on my phone.

7. Known Constraints

Scratchpad is local-only. OAuth grants identity only; publishing stays manual.
